DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8, 11 and 12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gwozdz (3,725,973). Gwozdz shows various bushings. Each of the embodiments, for example figure 7, has a first bushing 27 having a cylindrical portion (sidewall), a shoulder (base wall), a second bushing 34, and a shoulder 35. The first bushing is made of metal and the second bushing is made of plastic. Both bushings are press-fit. "smooth" is a relative term.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 3 and 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gwozdz '973 in view of Rainville (4,809,402).

'973 discloses the invention as claimed but for the lug being made of a

composite. '402 teaches a hinge lug made of graphite composite for its high

strength and corrosion resistance. It would have been obvious to one of ordinary skill in the art at the time the invention was made to form the hinge of '973 with graphite composite for the advantage of its high strength and corrosion resistance.

As to claim 3, titanium is well known for its lightweight, strong, wear and tear resistant characteristics. It would have been obvious to one skilled in the art to form the metal bushing of '973 with titanium to take the advantage of the above-mentioned characteristics to prolong durability.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gwozdz '973 for the same reason as stated in last paragraph, regarding claim 3.

Allowable Subject Matter

6. Claims 2, 4 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
